GWO Updates 2026

What do you need to know?

What's New:

- Introduction of refresher standards for Advanced Rescue Training
- Single rescuer incorporated into Advanced Rescue Training modules
- Scenario led refresher training
- Removal of Working at Heights & Manual Handling combined module, these can now only be attended as standalone modules for both initial and refresher
- Removal of Working at Heights being refreshed with Advanced Rescue, these can now only be attended as standalone modules

What You Need To Do:

- Check your WINDA account and make sure you know your expiry dates
- Ensure your Advanced Rescue Training is in date before September 10th 2026
- Watch out for your Singleton module now expiring, it will expire with the corresponding ART module
- Don't worry if you don't see Singleton on your WINDA certificate if you attend a new initial ART or refresher ART, it won't show as a separate module anymore
- Remember that your Working at Height and Manual Handling will no longer refresh with your ART
